Peavey's® MiniMEGA™ Bass Amplifier Now Available

January 20, 2016 - Peavey Electronics® announces the immediate availability of the new MiniMEGA™ 1000 Watt bass amplifier head. Delivering classic Peavey tone, the MiniMEGA produces a full and rich sound in a compact package that weighs in at only 9 lbs. Using technology not found in other bass amps, the MiniMEGA represents a new level of compact bass amplifier performance.

Peavey's proprietary KOSMOS® enhancement provides increased bass impact, while the exclusive psychoacoustic low-end enhancement adds bass without overburdening speakers. The MiniMEGA contains additional modern features such as a built-in compression with defeat switch, a 4-band EQ with Punch and Bright switches, and semi-parametric mid controls with narrow Q controls.

The back panel of the MiniMEGA has all the connectivity necessary to patch in effects or connect to a sound reinforcement system. Complete with an effects loop, gain control, crunch button, tuner output, master volume, mute control and more, the MiniMEGA delivers the high level features that today's professional bass player demands. With 1,000 watts continuous into 4 ohms, the head features a 1/8" headphone output, two twist-lock combo 1/4" outputs, DI output with XLR, and DI pre-post switch. Also included is a MIDI footswitch input, DDT™ limiter, ground lift, and Pad controls. Complete with user-definable control surface color lighting, the MiniMEGA comes with a carrying bag.
