Ecoustic Series Firmware Update Procedure:

You must use a MIDI to USB cable for this procedure.

1. Open "vypyrUpdater.exe" (available on www.peavey.com)

2. Turn the unit on and connect MIDI/USB cable from the USB connector on your PC to the MIDI jack on the amplifier.

3. Select "Open Firmware" in the "File" menu.

4. Load "ecoustic 1.17.syx" from the location in which it is stored on the PC.

5. Select "Out >" in the "Midi" Menu and specify the MIDI-to-USB device that is connected.

6. Select "Upload Code" in the "Run" menu and wait for the firmware to upload.

7. After the PC shows a prompt indicating that the upload is complete, disconnect the MIDI cable and cycle power to the unit via the power switch.

Update Log:

1v17.syx: Reduces the recorded loop volume by 3dB for better performance playback.
